Department

- ☐ Human Resources
- ☐ Research & Development

Workforce Insights

- Overall attrition rate stands at ~16%, indicating moderate employee turnover
- Employees aged 26–35 show the highest attrition, suggesting early-career turnover risk
- Research & Development experiences the highest number of employee exits
- Sales roles dominate workforce distribution but also contribute significantly to attrition
- Gender distribution is relatively balanced, indicating no strong gender-based workforce imbalance
- Job role concentration suggests workforce dependency on a few key roles

Key Attrition Drivers

- Employees earning below \$5K monthly show the highest attrition levels
- Overtime is a major risk factor, with a significant portion of employees leaving while working extra hours
- Lower job satisfaction scores (2–3 range) are strongly linked to higher attrition
- Employees with less than 5 years at the company are the most likely to leave
- Poor work-life balance contributes to increased employee turnover
- Attrition risk is highest among early-tenure, lower-income employees

Attrition by Job Role (High-Risk Roles)

Attrition by Department & Job Satisfaction

Retention Strategy Insights

- Employees earning below \$5K and working overtime represent the highest attrition risk
- Laboratory Technicians, Sales Executives, and Research roles show the highest turnover
- Attrition is concentrated in Research & Development and Sales departments
- Low job satisfaction levels significantly increase attrition risk across departments
- Early-career employees in high workload roles are most likely to leave
